Methodology:

SOP 428.02: Many Analyte Screen by Gas Chromatography-Mass Spectrometry and deconvolution software

Unit Conversions:

ppb = parts per billion
ppm = parts per million
ppt = parts per trillion
ng/g = ppb
ng/L = ppt
ng/mL = ppb
ng/ μ L = ppm
ng/g(Wristband) = ppb
pg/ μ L = ppb
 μ g/mL = ppm

Abbreviations:

J flag: Indicates lower precision in quantitation due to values near limits of detection or matrix effects.
B flag: The sample was background corrected.
U* flag: Indicates confirmed presence of the chemical but inability to quantify due to matrix interference.
Y flag: Indicates a chemical is present but quantitation is not possible.
< 123.45 U: Detection limit, indicates value was below limit of detection.

COA Notes:

Twenty total samples were submitted by client. A total of 20 samples were analyzed.

Quality Control Summary:

Continuing calibration verification (CV) analyses were performed at the start and end of every analytical batch. A total of five CVs were analyzed as part of the complete project. All CVs met FSES data quality objectives (DQOs) of >70% compound detection frequency, retention time standard within DQO window, >60% of compounds detected within 2.5X of true concentration.

During the analysis of samples for this project a total of 10 instrument blanks (IBs) were analyzed. In all cases IBs met FSES DQOs for all target analytes. Briefly, all target analytes in all IBs are below the method limits of quantitation.

To demonstrate instrument precision a duplicate analysis was performed during the project. Across all detected analytes there was an average relative percent difference (RPD%) of 2.5%.

To assess instrument accuracy a sample over-spike analysis was performed where a sample was spiked at 2 PPM with target compounds prior to additional clean-up. Across detected analytes there was an average relative standard deviation (RSD%) of 79%.

A post deployment cleaning and solid phase extraction blank were run with this project. No target analytes were detected in these QC samples.
